

A 2-way marketapp to buy and sell old books

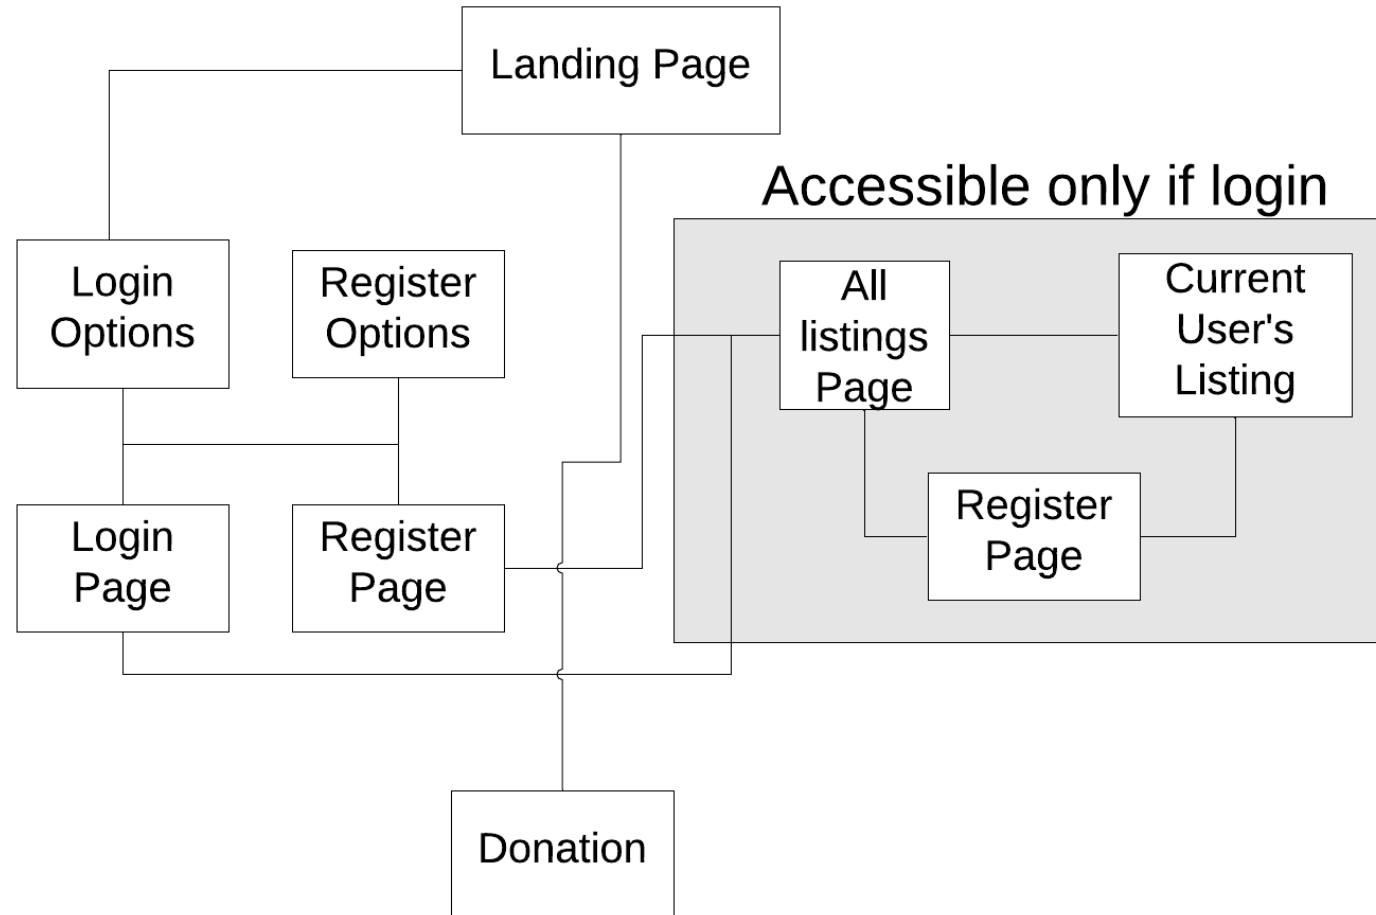

# Books Buzza ERD

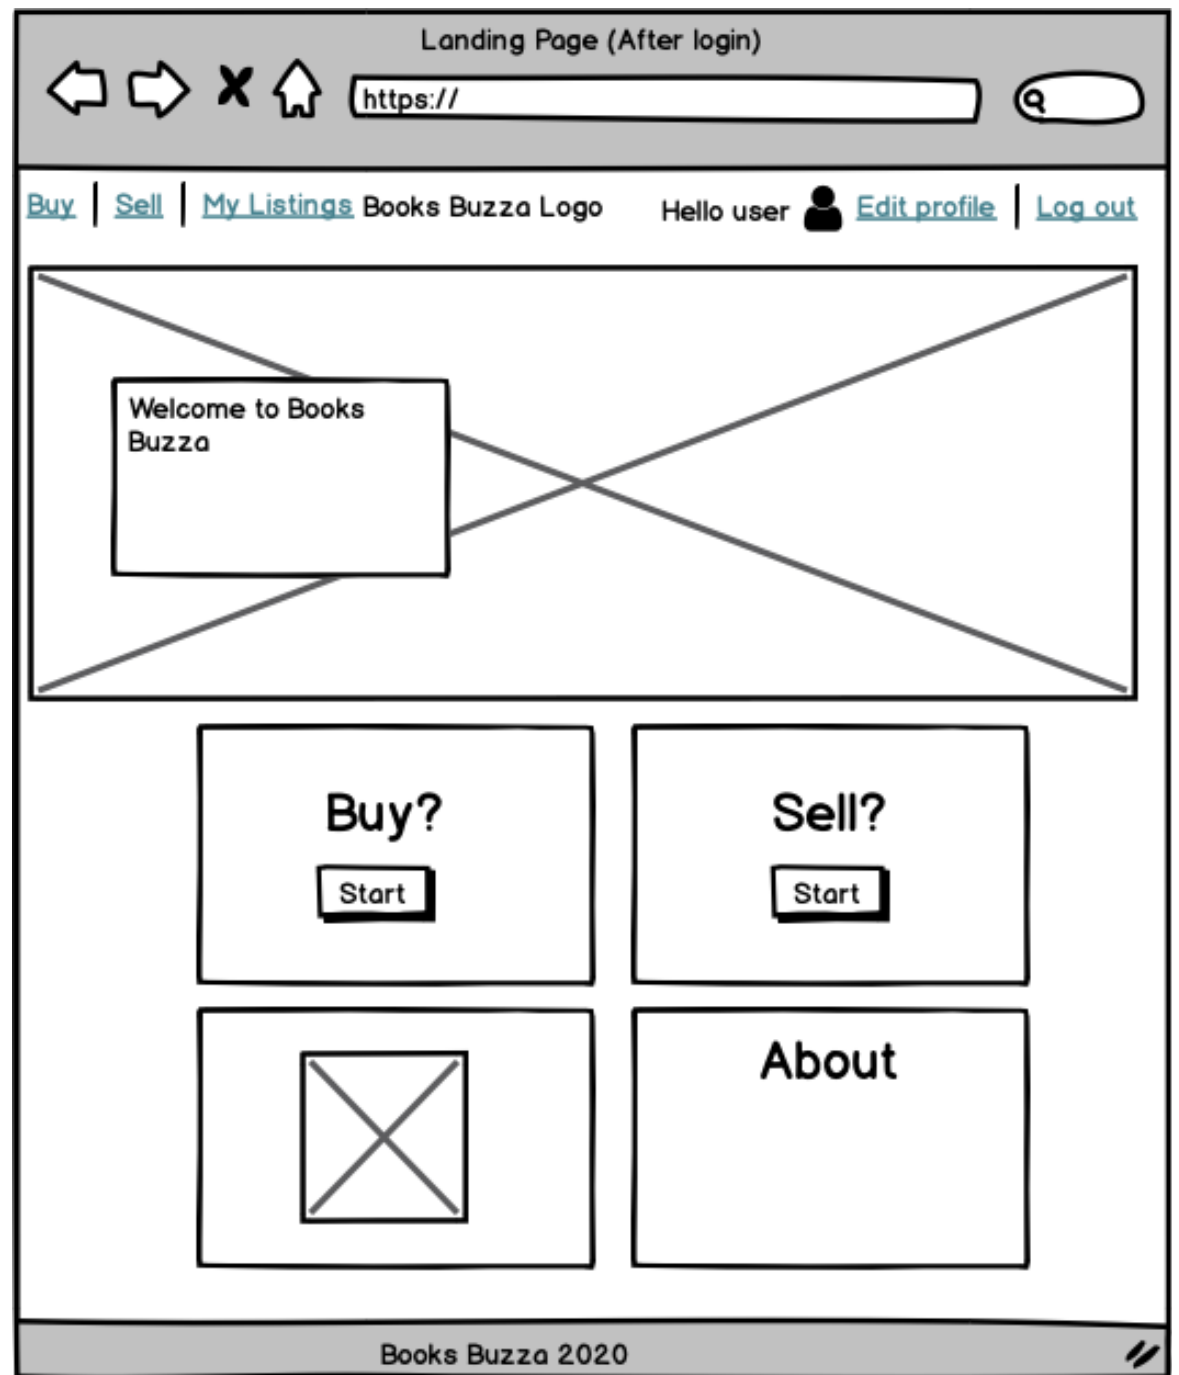

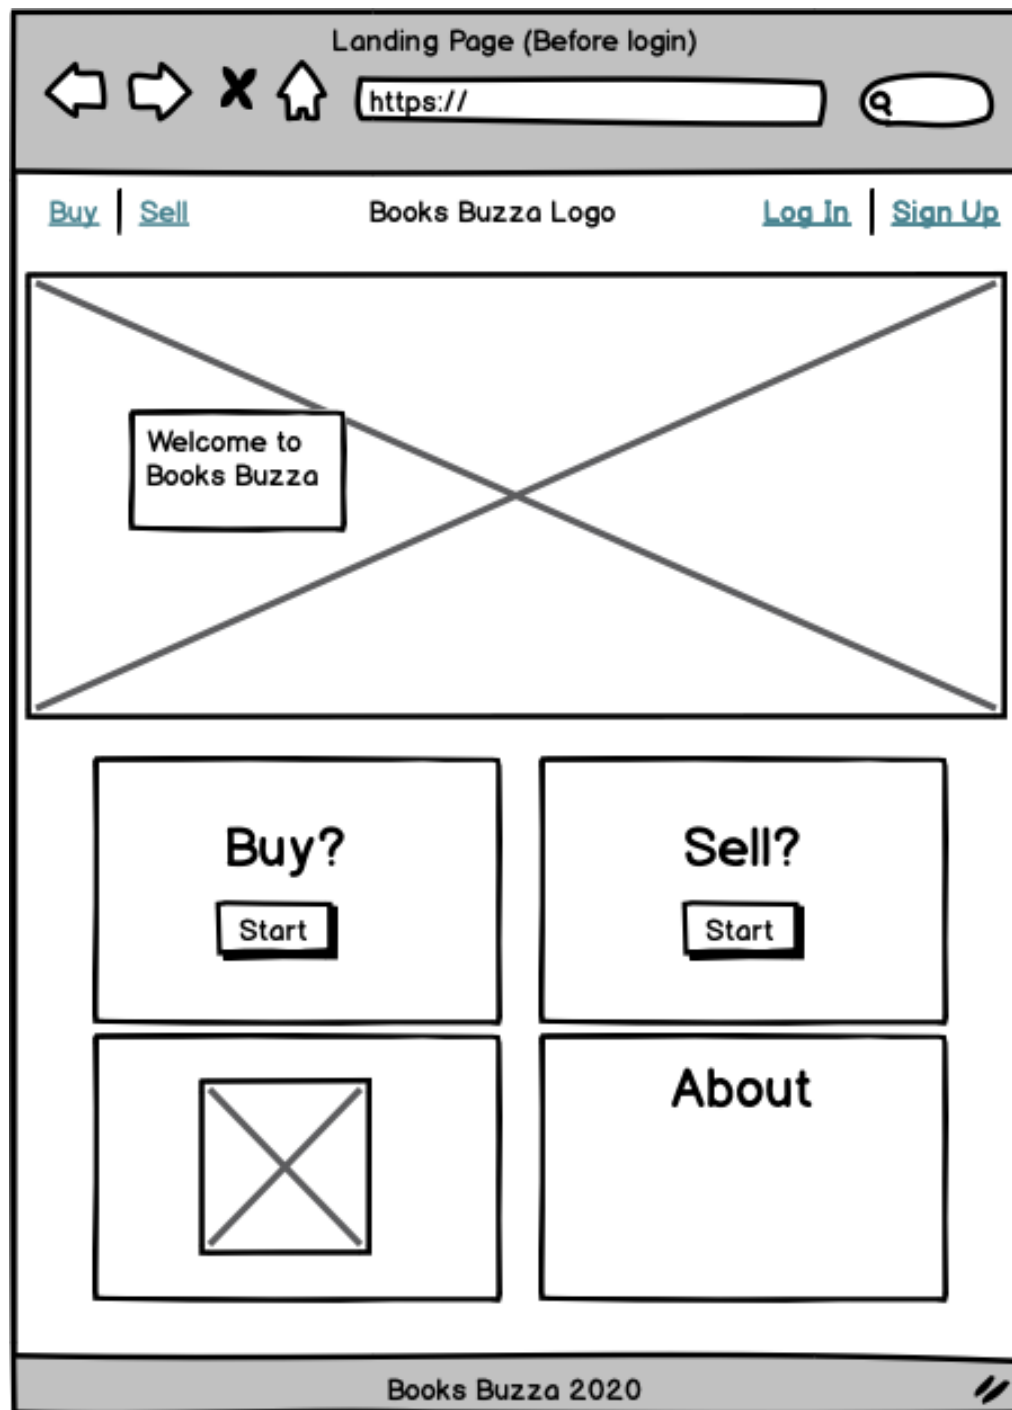

# FEATURES/FUNCTIONALITY

1. CRUD functions for listing - users can create a list and saved to the postgresql database. This list can be viewed, edited and updated. The list can also be deleted. The functions are implemented in the listing controller.
2. 2. CRUD functions for users - users can register for an account, edit the profile changing password and cancer account. This is managed by using Devise gem.
3. 3. Search function - users can search for the type of book categories or the book title.
4. 4. Facebook login - Being able to login through social media is a popular way to get users to use the app as the signup and login steps are faster.
5. 5. Payment Platform for donation - happy users can donate \$10 by clicking on the "Donate \$10" button and they will be directed to the Stripe payment platform. After payment, they are redirected back to a page that says "Thank you".
